

C++ For Loop

The C++ for loop is used to iterate a part of the program several times. If the number of iteration is fixed, it is recommended to use for loop than while or do-while loops.

The C++ for loop is same as C/C#. We can initialize variable, check condition and increment/decrement value.

```
for(initialization; condition; incr/decr){  
    //code to be executed  
}
```

Flowchart:

C++ For Loop Example

```
#include <iostream>  
using namespace std;  
int main() {  
    for(int i=1;i<=10;i++){  
        cout<<"\n";  
    }
```

↑ SCROLL TO TOP

```
}
```

Output:

1
2
3
4
5
6
7
8
9
10

C++ Nested For Loop

↑ SCROLL TO TOP

In C++, we can use for loop inside another for loop, it is known as nested for loop. The inner loop is executed fully when outer loop is executed one time. So if outer loop and inner loop are executed 4 times, inner loop will be executed 4 times for each outer loop i.e. total 16 times.

C++ Nested For Loop Example

Let's see a simple example of nested for loop in C++.

```
#include <iostream>

using namespace std;

int main () {
    for(int i=1;i<=3;i++){
        for(int j=1;j<=3;j++){
            cout<<i<<" "<j<<"\n";
        }
    }
}
```

Output:

```
1 1
1 2
1 3
2 1
2 2
2 3
3 1
3 2
3 3
```

C++ Infinite For Loop

If we use double semicolon in for loop, it will be executed infinite times. Let's see a simple example of infinite for loop in C++.

```
#include <iostream>

using namespace std;
```

↑ SCROLL TO TOP

```
int main () {  
    for (; )  
    {  
        cout<<"Infinitive For Loop";  
    }  
}
```

Output:

```
Infinitive For Loop  
Infinitive For Loop  
Infinitive For Loop  
Infinitive For Loop  
Infinitive For Loop  
ctrl+c
```
